

# The Digital Resilience Checklist

codetry.ca

5 things every self-reliant household and local business should own, not rent.

1

## Own your domain

Your domain is your address on the internet. It costs about \$15/year and nobody can take it away as long as you pay the renewal. If your business only lives on social media or a rented platform, you don't own your front door.

**Action: Register at Namecheap or Cloudflare Registrar. Point it at something you control.**

2

## Own your data

Know where your customer list, your orders, and your content actually live. Can you export them right now? What format? Where would you take them if the platform shut down tomorrow?

**Action: Export your data from every tool you rely on. Store a copy locally today.**

3

## Own your tools

Every SaaS tool you depend on is a single point of failure. If the platform shuts down, raises prices, or bans your account — can you still operate? Open-source and self-hosted alternatives exist for almost every category.

**Action: List the 3 tools you'd be most crippled without. Find their open-source alternatives.**

4

## Know your local food chain

Who grows food within 50 km of you right now? Do you know their names? Do you have a way to reach them that isn't through a platform? A resilient household knows its producers before it needs them.

**Action: Find one local producer this week. Buy something directly from them.**

5

## Have a Plan B for payments

Payment processors freeze accounts with no warning. Stripe, PayPal, Square — all have done it. Cash, e-transfer, and invoice-based payment are not old-fashioned; they're resilient.

**Action: Make sure at least one payment path doesn't run through a single corporate platform.**
